

SpamDetour

...Clean up and speed up your internet link

Maximum protection and security • Professionally managed service • Constantly updated

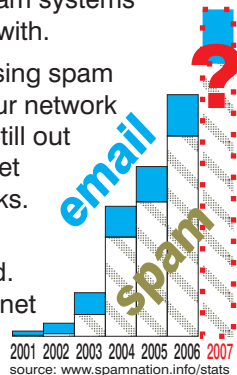

If you hate spam you will love SpamDetour

Spam is no longer just a time-wasting nuisance. It is a menace. It is a major cause of fraud. It places data and reputations at risk.

Would you invite criminals inside your house and *then* deal with the problem of removing them? Obviously you would keep the criminals as far away as possible. Yet that's how most anti-spam systems work; they bring spam into your network to be dealt with.

Now there is a safer way to deal with the ever increasing spam menace. SpamDetour keeps spam far away from your network server and internet link. It removes spam while it is still out on the internet, before it can contaminate your internet link and expose your organisation & your team to risks.

A major European study has found that spam costs employers US\$900 p.a. *per employee* in time wasted. Stop wasting your staff's time and choking your internet link with spam. SpamDetour will free up your staff for higher productivity and speed up your network.

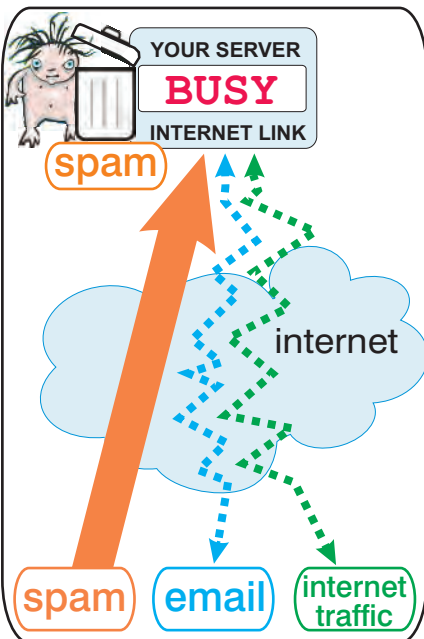

Spam represents 80% of email and growing in volume and criminal impact. It's time for a more powerful system to protect your business.

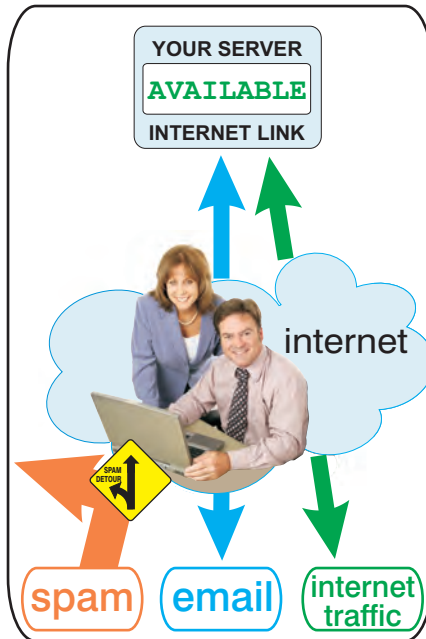

In recent tests SpamDetour removed 99% of spam. It removed many types of spam which were not detected by in-house spam filters.

Without SpamDetour

With SpamDetour

Key Benefits:

- 1 Improved productivity of your team since there will be less spam to distract your staff from their work and waste their time
- 2 Our servers are constantly updated using the worlds most powerful blacklist databases plus our own anti-spam rules
- 3 Faster web browsing
- 4 Faster speed on your WAN, VPN and LAN since their is less traffic on your network
- 5 Faster email since there is less data for your server to manage
- 6 Reduced need to expand your internet bandwidth once you remove spam congestion from your internet link
- 7 No need for you to buy anti-spam software
- 8 No need for you to maintain anti-spam software and rules. We do all the work
- 9 Designed to cope with the increasing volume and sophistication of spam
- 10 Higher security and safety since we make your email server invisible to hackers who may hijack your system for "phishing"
- 11 You can log into our website, check your spam statistics, add to blacklists/whitelists

DANGER Spam is becoming more dangerous with increasingly sophisticated criminal attacks including identity fraud, hoaxes, virus, spyware and trojans. SpamDetour offers a higher level of protection plus it makes your email server invisible to hackers, this protects you against phishing. Phishing is a common identity fraud where spammers act as parasites to hijack your email server to transmit spam.

The email server hijack life cycle: Spammers are continuously being blacklisted so they need to constantly find and hack into new "innocent" email servers to relay spam. First your email slows down because of the spam parasite. Then the internet learns your server is spamming & you will be blacklisted. Finally your genuine email will be blocked by your clients. You have to prove your innocence & try to reverse the blacklist process.

30 day 100% money-back guarantee or free 30 day trial - you choose!

Price: \$5.50 per email user per month.

Minimum 10 users. Prices include GST.

Price includes one email domain. Additional domains @ \$33 per month.

"Fair go policy" allows up to 100mb /month per email user. Above 100mb pro-rata applies.

Feature comparison

		Traditional in-house email filters	SpamDetour
1	***	Higher level of protection against hackers, since your server is invisible on the internet This protects your business against "phishing" - being hijacked, risking your business being blacklisted	- ✓
2	***	Designed to cope with the increasing sophistication and volume of spam	- ✓
3	***	Constantly updated with the latest blacklists and algorithms	- ✓
4	***	Maintenance free	- ✓
5	**	Increased speed on your internet link (reduced need to expand internet bandwidth)	- ✓
6	**	Reduces load on your server for faster in-house network operation	- ✓
7	*	Removes basic spam	✓ ✓
8	**	Removes advanced spam	- ✓
9		Self-managed "blacklists" and "whitelists"	✓ ✓
10		Tailor your anti-spam rules to suit the needs of your organisation	✓ ✓
11		Removes the cost of anti-spam software licence renewals	- ✓
12		Online reporting on anti-spam performance	? ✓

Removal of spam can ease the bottleneck and make a substantial improvement in the performance of your internet link

Note regarding the limitations of SpamDetour in the ongoing battle against spam: SpamDetour is a powerful dedicated anti-spam system which provides a higher level of protection against spam compared with traditional in-house server based anti-spam software. There is a constant battle between the "bad guys" (the spammers) and the "good guys", those of us who are constantly developing and improving technology to fight spam. Each time we develop a new method to prevent spam, the spammers find a new way to create spam, and so on the battle rages on. SpamDetour provides you with a higher level of protection however, due to the ongoing nature of the battle, there is no way to totally prevent spam. Also, please note that although SpamDetour is primarily an anti-spam tool and, although it will prevent some viruses, you should still maintain a current anti-virus and anti-spyware software package on your system.
